Course Overview:

- This course is aimed at introducing the power-substation layout and design to utility and industrial engineers. The course will cover substation layout, design, grounding and protection. The course will be supported by practical design examples.

Course Objective:

- To improve the skills of engineers involved in design, operation and maintenance of electric power substation. A degree in electrical engineering is recommended to gain maximum benefit from the course

Who Should Attend?

- Engineers involved in design, operation and maintenance of power substations. A degree in electrical engineering is recommended to gain maximum benefit.

Course Outline:

- Introduction
- Power Systems
- Substations componets
- H.V Substations up to 220 kV
- Transformers
- Reactors
- Regulators
- Outgoing and Incoming Overhead Lines
- Substation Grounding
- Zones of Protection
- Circuit Breakers
- Reclosers, Sectionalizers and Fuses

Training Methodology:

- Presentation & Slides
- Audio Visual Aids
- Interactive Discussion
- Participatory Exercise
- Action Learning
- Class Activities
- Case Studies
- Workshops
- Simulation
