- The continuity of Electrical Power Supply is very important to the consumers specially, for industrial sector where the curtail of electrical power supply is costly.
- It is important to take the necessary action to prevent the faults, and If they do occur, to minimize possible damage or possible power disruption. A protection system continuously monitors the power system to ensure maximum of electrical supply with minimum damage to life, equipment and property.
- Many utilities need this practical course that studies the Relay characteristics during faults, and weak protection points in electrical systems these studies will be elaborated by practical case studies.

## Course Objective:

- Knowing the fault reasons in electrical networks and Its effect on the electrical quantities.
- Reviewing the Grounding System of generation, Transmission and Distribution Networks and how it affects the electrical quantities, short circuit level and protection system.
- Understanding main concepts of protection equipment and its necessity in electrical System.
- How to make relay coordination for main and back-up protection relays on lke network.
- How to find the cause of relay operation and verify if it is correct, falls or mal operation
- How to protect the power system due to up normal operational conditions.

### **Who Should Attend?**

• This course is intended for Engineers, Technicians (Basic & Medium Level), operation, maintenance, protection, control and analysis of Utilities & Industries Electrical Networks.

## **Course Outline:**

- Introduction To Power System Relaying (PSR)
- Fuses
- Measuring Transformers (VTS & CTS)
- Protective Relays
- · Relay Coordination
- Differential Relays (D.R)
- Impedance Relays
- Under Frequency Protection (U/F.P.)
- Over Voltage Protection (0/V.P.)
- Control

#### **Training Methodology:**

- Presentation & Slides
- Audio Visual Aids
- Interactive Discussion
- Participatory Exercise
- Action Learning
- Class Activities
- Case Studies
- Workshops

• Simulation
