Course Overview

This course is designed for Engineers and Technicians who are involved in the operation and management of auxiliary boiler system which fundamentally include the feed water analysis and treatment onboard. It provides the essential knowledge and skills necessary to support the various tasks and requirements for safety and efficient operation of all the systems involved in vessel's marine steam plant.

Course Objective

- Boiler designs and its components according to vessel's requirements;
- Proper handling and monitoring for safe and efficient plant operations; and Boiler water test, analysis, and treatments required.

Who Should Attend?

Mechanical, Operation, Production, and Maintenance Engineers Senior Technicians should benefit from this course. Also Senior Technicians can update and refresh their knowledge by attending this course.

Course Outline

- Boiler Components
- Instrumentation and Control System
- Routine Maintenance & Repairs
- Trouble Shooting Guides
- Boiler Water Analysis & Treatment

Training Methodology

- Presentation & Slides
- Audio Visual Aids
- Interactive Discussion
- Participatory Exercise
- Action Learning
- Class Activities
- Case Studies
- Workshops
- Simulation
